WITH esi 

The smart solution that guarantees your investments in energy efficiency

GoSafe with ESI is a solution that is added to your energy efficiency projects to guarantee the savings promised by your technology provider when it comes to being more efficient in energy use.

We know that high energy efficiency projects may require a higher upfront investment than that of conventional equipment, but its operating costs are much lower in the long run, so you get significant savings.

When you add GoSafe with ESI to your project, you are getting a holistic and unique solution that assures the energy savings.

Find out what GoSafe with ESI and your technology provider can do together:

Your energy bill, maintenance costs, and downtime will be significantly reduced.

You will invest with reduced risk of losses, since if the provider cannot meet the promised savings, the insurance will compensate you.

By incorporating **GoSafe with ESI** into your project, you will have easier access to green financing lines with competitive conditions.

Projects that incorporate **GoSafe with ESI** are validated by an independent technical entity so that there are no doubts regarding the project's energy savings potential.

Your company will have the most efficient technology available in the market, and your business will become more efficient, productive, and your competitiveness will improve.

The projects that have **GoSafe with ESI** are tailor-made according to the needs of each company.

You will be aligned with climate change regulations and contribute to environmental sustainability, thanks to the reduction of your energy consumption, and therefore, of greenhouse gases emissions.

You also count with the backing of the European Union: **GoSafe with ESI** has been created with funding from European Union Horizon 2020 programme.

GoSafe with ESI is the key component for your energy efficiency project that you cannot miss, as it is the only solution that guarantees the energy savings promised by your provider.

Don't risk your investment and ask your provider to incorporate GoSafe with ESI into your project.
