

ENERGY EFFICIENCY WITH GUARANTEED SAVINGS

go safe WITH esi be energy efficient

ENERGY EFFICIENCY IS THE SOLUTION

GoSafe with ESI is a solution designed by ESI Europe to help companies across all sectors to become more energy efficient.

By including **GoSafe with ESI** in an energy efficiency project, you add an innovative solution that guarantees the savings generated by implementing

more efficient technologies. Reduction in energy consumption helps companies improve the productivity and the sustainability of their operations.

GoSafe with ESI offers a number of tools that minimise risks of energy efficiency investments.

It is the solution to offer guaranteed savings in energy efficiency.

GOSAFE WITH ESI INCLUDES

GOSAFE WITH ESI CONTRACT

An agreement between technology provider and company that works as a transparent framework for guaranteeing energy savings.

ENERGY SAVINGS INSURANCE

A policy provided by an insurer that works as surety on the energy savings guaranteed by the technology provider for a period of up to 5 years.

TECHNICAL VALIDATION

The project and its potential to deliver the guaranteed energy savings are approved by an independent validation entity, who will act as arbiter in case of disagreement.

FINANCING

Access to financial institutions that provide green credits.

ONLINE PLATFORM

A space where the provider, the company and the validation entity can follow the project progress, from the activation of the contract up to the monitoring phase.

GOSAFE WITH ESI TECHNOLOGY PROVIDERS OFFER

PROJECT CUSTOMISATION

The project will be adapted and customised according to needs of each company.

CONTINUOUS SUPPORT

The maintenance of the equipment and the monitoring of the guaranteed savings are performed by the technology provider after the project installation.

STATE-OF-THE-ART TECHNOLOGY

Use of the best efficient technologies available in the market.

HOW DOES IT WORK?

PREPARATION PHASE

The technology provider specialised in energy efficiency presents a project with energy savings guaranteed.

CONTRACT ACTIVATION

The validation entity performs a technical evaluation to validate the guaranteed energy savings. The insurer issues the savings insurance and, after that, the contract is activated.

IMPLEMENTATION PHASE

The technology provider installs the new energy-efficient equipment, and the validation entity verifies that the installation has been carried out according to the contract.

OPERATIONAL PHASE

The new equipment reduces energy costs and improves productivity. Maintenance by the technology provider ensures it is operating optimally.

MONITORING OF SAVINGS

Energy savings are measured and reported periodically by the technology provider through a simple online platform, where they are reviewed and approved by the company.

INSURANCE COVERAGE

In case of any disagreement, the validation entity acts as an arbiter. If the technology provider does not fulfil the contractual agreement, the insurance covers for the savings not achieved.

i Supported by the European Union: The Energy Savings Insurance (ESI) Europe project has received funding from the European Union's Horizon 2020 research and innovation program to promote investment in energy efficiency.

GoSafe with ESI

is a solution to guarantee energy savings. Your projects can contribute significantly to environmental sustainability and climate change mitigation due to decreased energy use, which further helps with reducing greenhouse gas emissions.

Join GoSafe with ESI and drive sustainability.
